Project 1: Website Link

Repository Link

Description:

This is a social media app where you can POST and DELETE data. You can view all user's posts and even view their profile that has all their posts on it. You can login and view your own profile, and your own profile page you will have the ability to delete the post. Functionality to add posts include: Post Title, post itself, a checkbox to click if it's Share Worthy.

Project 3: Website Link

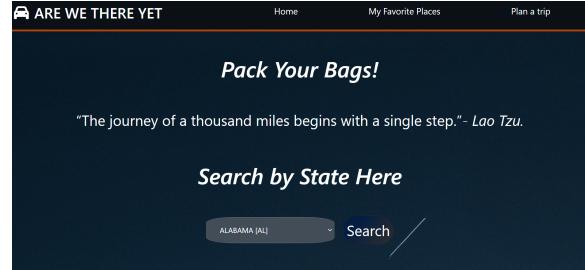

Repository Link

Description:

This web application allows users to search used cars for sale and post a new car for sale after creating an account. The project has an originally made API for used cars. The used car API includes the following details: car make, model, year, price, mileage, color, salvage title, transmission, and image.

Project 2: Website Link

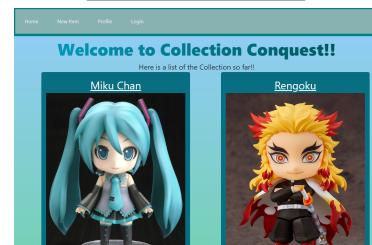

Repository Link

Description:

An application using third-party APIs to find local parks throughout the country of the U.S.A. and show all the data you need to enter the park. Along with showing the location of the park on the map. Giving you also the ability to add a "To Do List:" to help you along your journey.

Project 4: Website Link

Repository Link

Description:

MERN stack (**MongoDB**, **Express.js**, **React.js**, **Node.js**) application designed using React and Chakra-UI for the Front-End. GraphQL with Node.js, Express.js, and MongoDB, and the Mongoose ODM for the Back-End, and queries and mutations for retrieving, adding, updating, and deleting data.
